Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(http://www.tigr.org/software/glimmerm/), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein databases, nr (ftp://nCBi.nlm.nih.gov/blast/db) and the CDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTS represent the identified CDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified CDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and 'like protein. A gene without significant homology to any protein but with full-length cDNA or BST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by a single gene prediction program is classified as a probable 'hypothetical' protein according to IRGSP standard. A gene prediction program is also classified as a probable 'hypothetical' protein and is included as a niscellaneous feature of the sequence of COI301 clone (DDBJ: APO04276) at 3 partial sequence of COI301 clone (DDBJ: APO04276) at 3 end. The sequence of COI301 clone (DDBJ: APO04276) at 3 end. The sequence of COI301 clone (DDBJ: APO04276) at 3 end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information of this entry is available at the thin annotation of this entry is the bast of the abstraction of this entry is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /gane="01301_C12.1"

A gene with the corresponding DDBJ accession no.

A gene with identity or significant homology to any protein but with full-length copy to any protein but with full-length copy to any protein but with full-length copy or solesified as a probable 'hypothetic
                                                                                                                                                                                                                            ARUU4185
Oryza sativa (japonica cultivar-group) genomic DNA, chromosome 7,
BAC clone:0J1301_C12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This is a partial sequence of 001301 C12 clone. This sequence of 001301 C12 clone. This sequence AP004276)at 5' end and an overlap with 001127 E01(DDBJ: AP003747) at 3' end. The sequence was generated by combining Monsanto and RGP-Japan sequencing data. Detailed information on overlap and assembly quality together with annotation of this entry is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oryza sativa (japonica cultivar-group)
Oryza sativa (japonica cultivar-group)
